(a)
consecutive stretches and residue classes
low-mode power / random sample
l = ln(|D|/π)
B10
C100
D100
E100
one stretch over all starts
D mod 840
(b)
first zero: even (colour), odd (grey)
mean x₁ − USp(2N_eff)
l = ln(|D|/π)
0.094/l without E100
c l^-a with E100, a = 1.60
B10
C100
R10
D100
E10
E100
(c)
shape of the first zero at x₁ = 1: even, odd grey
F(1) − USp(2N_eff)
l = ln(|D|/π)
c l^-a without E100, a = 1.34
with E100, a = 1.62
B10
C100
R10
D100
E100
(d)
first zero by calibration: E100 and C100
mean x₁ − USp(2N_eff(a))
end of the calibration interval a (N_eff from the density on [0, a])
C100 even
C100 odd
E100 even
E100 odd
